Summary

Software engineer focused on building scalable, reliable, and user-centric applications using Python and modern web technologies. Experienced across the SDLC in backend development, REST APIs, databases, testing, debugging, and deployment within Agile environments. Strong problem-solving mindset with a focus on maintainable software, efficient systems, and production-ready solutions.

Skills

Programming: Python, SQL, JavaScript, Object-Oriented Programming, Data Structures & Algorithms

Software & Backend: SDLC, Django, REST APIs, API Development, React.js, HTML, CSS, Tailwind CSS, Application Testing, Git, GitHub

AI, ML & NLP: Machine Learning, Predictive Modeling, Feature Engineering, Model Evaluation, XGBoost, TensorFlow, Scikit-learn, NLP, LLMs, RAG, GraphRAG, LangChain, Neo4j, ChromaDB

Cloud, DevOps & Data: AWS, Docker, CI/CD, Linux, PostgreSQL, Pandas, NumPy, Power BI, Tableau, Excel

Experience

Data Science Intern

Jan 2026 – Jun 2026

AiVariant

Bengaluru, India

- Developed AI-powered applications using Python, Large Language Models (LLMs), and Retrieval-Augmented Generation (RAG) workflows for intelligent information retrieval.
- Built Neo4j knowledge graphs and vector retrieval pipelines to support GraphRAG-based contextual search and question-answering capabilities.
- Developed API-based services supporting document ingestion, retrieval workflows, and LLM-powered response generation.
- Deployed and tested machine learning applications while utilizing Git-based version control for collaborative development and feature integration.

Projects

Hybrid Economic Intelligence Platform | [Link](#) | Python, Neo4j, LangChain, ChromaDB

- Architected a hybrid retrieval pipeline (Semantic + Graph) to process 100+ pages of high-complexity macroeconomic reports, strengthening retrieval quality for multi-hop financial queries.
- Engineered a knowledge graph using Neo4j to model causal relationships between repo rates and CPI inflation, enabling graph-assisted policy reasoning.
- Optimized inference using Groq-hosted Llama 3.1 and HuggingFace embeddings, implementing top-k semantic retrieval to reduce hallucinations.

AutoIntel-AI | [Link](#) | Python, MLOps, Streamlit

- Developed a regression model using XGBoost achieving R^2 score of 0.85 with advanced feature engineering.
- Implemented 5-fold cross-validation and residual analysis to compare Random Forest and linear models.
- Built a modular end-to-end ML pipeline for preprocessing, training, and inference.

Auto-ML Model Recommendation Framework | [Link](#) | Python, AI/ML

- Built a scalable algorithm selection system based on the No Free Lunch Theorem for automated model recommendation.
- Designed a modular ML pipeline supporting both classification and regression workflows.
- Integrated XGBoost, LightGBM, and CatBoost with a leaderboard-based system for transparent and efficient model selection.

Certifications & Publications

Data Science Certification of Excellence | [ExcelR](#) | [Credential](#)

Masters Program in Data Science | [NASSCOM FutureSkills Prime](#) | [Credential](#)

Education

B.Tech Computer Science and Engineering (Data Science)

2022 – 2026

Presidency University, Bengaluru

CGPA: 6.71 / 10
