Summary

Software Engineering and Data Science student skilled in Python, Data Structures & Algorithms, and scalable software development. Experienced in architecting data-driven applications, API-based systems, and performance-optimized workflows with a strong focus on reliability and problem solving.

Skills

Programming & Software Engineering: Python, SQL, Object-Oriented Programming, Data Structures Algorithms, Problem Solving

Backend & Web Development: Django, API Development, Debugging, Application Testing, HTML5, CSS3, JavaScript

Machine Learning & AI: Predictive Modeling, XGBoost, TensorFlow, RAG, GraphRAG, LLMs, LangChain, Neo4j

Tools: Git, GitHub, Scikit-learn, Pandas, NumPy, Streamlit, PyCharm

Experience

Data Science Intern

Jan 2026 – Jun 2026

AiVariant

Bengaluru, India

- Developed AI-powered applications using Python, LLMs, and RAG workflows for intelligent information retrieval.
- Built Neo4j knowledge graphs and vector retrieval pipelines supporting GraphRAG-based contextual search systems.
- Designed and developed API-based services for document ingestion, retrieval workflows, and response generation.
- Deployed, tested, and optimized applications using Git-based version control for collaborative development and feature integration.

Projects

Hybrid Economic Intelligence Platform | [Link](#) | Python, Neo4j, LangChain, ChromaDB

- Architected a hybrid retrieval pipeline (Semantic + Graph) to process 100+ pages of high-complexity macroeconomic reports, strengthening retrieval quality for multi-hop financial queries.
- Engineered a knowledge graph using Neo4j to model causal relationships between repo rates and CPI inflation, enabling graph-assisted policy reasoning.
- Optimized performance-critical inference workflows using Groq-hosted Llama 3.1 and HuggingFace embeddings, implementing top-k semantic retrieval to reduce hallucinations.

AutoIntel-AI | [Link](#) | Python, MLOps, Streamlit

- Developed a regression model using XGBoost achieving R^2 score of 0.85 with advanced feature engineering.
- Implemented 5-fold cross-validation and residual analysis to compare Random Forest and linear models.
- Built a modular and scalable end-to-end pipeline for preprocessing, training, and inference.

Auto-ML Model Recommendation Framework | [Link](#) | Python, AI/ML

- Built a scalable algorithm selection system based on the No Free Lunch Theorem for automated model recommendation.
- Designed a modular ML pipeline supporting both classification and regression workflows.
- Integrated XGBoost, LightGBM, and CatBoost achieving strong performance across datasets.
- Created a leaderboard-based system for transparent and efficient model selection.

Certifications

JETIR Research Publication (2025) | [Publication Link](#)

NASSCOM Masters Program in Data Science | [Certificate Link](#)

Education

B.Tech Computer Science and Engineering (Data Science)

2022 – 2026

Presidency University, Bengaluru

CGPA: 6.71 / 10
